DETAILED ACTION

Specification

- 1. The following is a quotation of an appropriate paragraph of 37 CFR 1.75:
 - (d) The claim or claims must conform to the invention as set forth in the remainder of the specification and the terms and phrases used in the claims must find clear support or antecedent basis in the description so that the meaning of the terms in the claims may be ascertainable by reference to the description. (See 1.58(a)).
- 2. Specification is objected under 37 C.F.R. 1.75(d) because a body (see claims 1 and 11) has not been described in the specification.
- 3. The disclosure is objected to because of the following informalities: Page 7, lines 7-8: The sentence "The notches 94 are ... cavity 88" should be deleted because it is a duplicate of a sentence in lines 5-6.

Appropriate correction is required.

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the first conductive member, the second conductive member and the circuit board must be shown or the feature(s) canceled from the claims 1-20. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet,

Application/Control Number: 10/624,415 Page 3

Art Unit: 2839

and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 7. Claim 1 recites the limitation "the first conductive member" in lines 7 and 9. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2839

9. Claims 1-4, 7-9 and 11-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Wang et al. (6296495).

Wang (Figures 1-10) shows an electrical contact 1 having a body (not numbered) with a contact portion 22 joined to the body and an L-shaped termination lead 10 secured to a first conductive member 80 on a circuit board wherein the lead is movable relative to the body to permit relative movement between the contact and the first conductive member. The lead extends at an acute angle from the body. The terminal end has a base end formed with a sidewall. The body has a central beam with termination lead extending laterally from the body. The body has a slot and includes end wall configured to be securely held in a socket body (housing) 3, which holds a plurality of contacts 1. The contact portion has a conductive beam 21.

Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 11. Claims 5-6, 10 and 19-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang et al. (6296495).

Wan shows all the features of these claims except a plurality of termination leads located at center and ends of the body (claims 5-6), the contact beams interleaved (claim 10) and a solder ball at an outer end of the termination lead (claims 19-20).

As to claims 5-6, it would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide a plurality of termination leads located at center and ends of the body because this would require a mere duplication and location of essential parts, which involve only routine skill in the art.

As to Claim 10, the instant invention does not provide any reasons or specific problem to be solved by interleaving of the contact beams. An official notice is given that such a feature is well known in the art of electrical connectors. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide such a feature to Wang's contact because this would provide a more compact contact with plurality of contact portions as is well known in the art.

As to Claims 19-20, an official notice is given that such a feature is well known in the art of electrical connectors. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide such a feature to Wang's contact because this would provide a well known and widely used means for soldering the contact to the circuit board.

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Olson (20010015373), Ito (5611698).
